

Recombinant Crimean-Congo Hemorrhagic Fever Virus Gc Protein, sFc-Tag

Product Information

Cat#

CRI-128

Product Name

Recombinant Crimean-Congo Hemorrhagic Fever Virus Gc Protein, sFc-Tag

Description

CCHF virus Gc with sheep Fc-tag (Gc, previously referred to as G1), meet the increasing need for high quality reagents for research into diagnosis of CCHF, as well as vaccine development. We also produce a human Fc-tag version of this CCHF virus Gc protein here.

Type

Recombinant

Gene

Gc

Species

CCHFV

Source

HEK293

Synonyms

Crimean-Congo Hemorrhagic Fever Virus Gc

Formulation

PBS, pH7.4.

Notes

This product is intended for research and manufacturing uses only. It is not a diagnostic device. The user assumes all responsibility for care, custody and control of the material, including its disposal, in accordance with all regulations.

Recombinant Crimean-Congo Hemorrhagic Fever Virus Gc Protein, sFc-Tag

Tags

Fc

Background

Crimean Congo hemorrhagic fever (CCHF) virus is a tick-borne enveloped single stranded RNA virus that belongs to the genus Nairovirus and a member of the Bunyaviridae family. CCHF virus causes a hemorrhagic disease in humans with up to 80% case fatality. Although the virus has only caused sporadic disease in the past, the expansion of the range of its vector, the Hyalomma tick, is causing increasing concern that case numbers will continue to rise (Dowall et al., 2017).

Since CCHF was first described in Crimea in 1944, sporadic outbreaks have occurred globally. In 2015, CCHFV was identified by the WHO as an emerging virus which is likely to cause a severe epidemic and which may present a public health emergency. Zoonotic transmission from host animals is the primary route of infection, with concerns this may increase in the next 10-20 years as the timing of religious festivals change. The virus may also be spread effectively by human to human contact, especially in hospital settings. There are also concerns that it may be used as a bioterrorism agent, with evidence that work on this was carried out both in the USSR and in Iraq.
